Sitz Barricade - S Architect - Sitz Spectrum - WEBO Justified 2136  
WEBO Resilient 2126 - Moore Big Chexs - McD Confidence

# Welcome to our 18<sup>th</sup> Annual Production Sale

*Thank the Good Lord we are all privileged to enjoy a great cattle market. It just makes life more fun!*

*First, thank you for your interest and for considering WEBO Angus. We have invested heavily in herd bulls the last 3 years. This is partly due to pure frustration on our part, we are just tired of bad feet. We try so hard to keep the cow herd walking on good feet, only to find out a couple years later we used another problem. We flat sell bad feet no matter who or what they are. Not to say feet issues won't crop up but they make for a quick trip to town.*

*We are applying intense pressure on feet and fertility as the very first selection criteria for replacement females. A bred cow that can't walk to water doesn't do any favors to the ranchers we know. We have added common sense carcass to the cow herd, we just don't believe in single trait selection. Our Wyoming environment and expenses just won't allow us to forget the basics that matter. Our program is striving to balance all important maternal traits & maternal indexes \$M & \$W, then add \$Feeder, \$Grid, and \$ Combined; that evaluates \$B & \$M in one index. We also use eyeballs and scales! Good maternal cows are a big deal to us, and we keep it at the front of selection criteria.*

*We continue to test for feedback efficiency. Again this year, every bull has been efficiency tested, we will have efficiency data, feed conversion, ADG & Epd's sale day. Please read the letter about efficiency testing by Dr Steve Paisley, Director UW-SARCE. We continue to work toward providing bulls that will stay in shape, cover country and influence the efficiency in your cow herd as well. It takes time but if we can effectively reduce consumption by 10 to 15% over several years in their offspring, this starts to add up quickly at the ranch and feedlot. We are striving for this without affecting performance and reproduction.*

*There are some power houses in this sale out of our herd bulls and bulls we raised as well as AI sires. They are going to step up and add some pounds as well as meet your goals for your program. They are not burned out on hot feed, we are raising bulls that will sire market topping calves or yearlings, targeting 1450#'s to 1600#'s pay weights in an efficient and timely manner, as well as grow and finish quickly. It is also important to us that our bulls will last several years, WE stand behind every bull. They have the hardy 'get it done' genetics we cherish, we think you'll like them. There is a set of good, big 2-year-old bulls; we keep some of our younger bulls exclusively for this group. The older bulls handle the miles to water, rough country, and really get the job done. They are PAP tested here.*

*Come for lunch on Tuesday, April 1! The Niobrara County Cattlewomen serve the great beef lunch. We welcome you to look the bulls over any time, make your selections and we'll provide additional help and information.*

*We are grateful and honored that you allow us to have the opportunity to be your source for high-quality Angus bulls. Thank you for taking your time to come.*

*Sincerely,  
Buttons York & Family*

Vaccine (foot rot), annual booster (2-yr-olds), PAP testing

**March** - Fertility Testing, Foseguard Vaccine (foot rot)

**Bulls will be tested BVD PI Free**

**Herd Development:**

Bulls are fed a forage based ration to have both optimum gain and growth. They will not be packing a lot of extra condition. They will look good, but will not be fat. We still maintain that too much condition will have an impact on their soundness and longevity. We believe they will be better breeders, sounder and last longer if they are not overfed. The dams of these bulls are wintered here at home. They have to make it on native pasture, hay and cake. If they work for us in this environment, they should work for you.

**Terms and Conditions:**

Cattle will sell under the suggested Terms and Conditions of the American Angus Association ([http://www.angus.org/Pub/suggested\\_sale\\_terms.pdf](http://www.angus.org/Pub/suggested_sale_terms.pdf)).

**Calving Ease Stars**

- 4 Bulls should work on all heifers
- 3 Bulls should work on most heifers and smaller younger cows (Really thin or extra small or really fine boned heifers excluded)
- 2 Bulls should work on most young cows unless they are thin or extra small framed
- 1 Bulls are for mature cows only

**Settlement and Delivery:**

All bulls are to be settled for sale day, unless prior arrangements are made. Free delivery is available within a 200-mile radius of Lusk, WY. Delivery beyond 200 miles at cost. We will begin delivering bulls within a few days of the sale. If you haul your bulls home on sale day, we will deduct \$75 per bull per buyer.

**Liability:**

All persons who attend the sale do so at their own risk, and WEBO Angus assumes no liability, legal or otherwise, for any accidents which may occur.

**Supplement Sheet:**

A supplement sheet will be available sale day with ultrasound data and updated performance as well as scrotals on all bulls. This sheet and all announcements from the auction block will take precedence over information in the sale book.

**Retaining Interest:**

We are retaining a 1/3 semen interest or revenue interest in all bulls selling unless announced differently from the auction block. Full possession and full salvage value sell on all bulls unless otherwise announced sale day.

**First Breeding Season Injury Guarantee:**

We offer a first year breeding season guarantee on bulls selling for **\$3,500 or more** for the 90 day period following first turnout of the bull, for any injury that would keep the bull from being a breeder for the first breeding season. If a problem occurs, buyer will be able to exchange the purchased bull for a bull of similar value. If a replacement is not available, the buyer will be given credit minus salvage for the original bull purchased, that is to be used within one year of sale. Lack of care or feed (starvation or no water), human error or injury caused by purchaser will cause this guarantee to be null and void. Example: Deliberately running into bull with pickap resulting in broken leg.

**PAP Testing (Pulmonary Arterial Pressure):**

In recent years, our industry has been seeing an increase in Right Heart Valve Failure in black hided cattle, both at lower elevations and in feedlots. Here at WEBO we have watched bloodlines and have been careful not to use lines that are known to have trouble with the issue. Growing up at Laramie and Centennial, WY, I have been very aware of the issues and the costs to producers with PAP problems. We have PAP tested all of the 2-year-old bulls in the sale, at 18-20 months of age. We do this because at this older age and elevation the bull's PAPs become more reliable and stable. We do not test our yearling bulls because the test results at best are only a screening PAP, **the accuracy is 60% or less for low scores on a really good day.** Low scores at our elevation on young animals does not mean they will remain so. Low scores are not predictable and may well not have much indication of their future level of reliability at an older age and or high elevation. **The results for high scores are accurate on younger animals at lower elevations,** the results are a screening test and alert us who the hyper-responders are. Lower PAP scores are a better indication for living successfully at high elevations.

**Insurance:**

We highly recommend purchasing full mortality insurance on the bulls you purchase, to protect you from loss should they die. Mortality & Infertility Insurance will be available through Dakota AG Insurance, Jared Mohnen 605-999-4475.

**ADG:**

Weights for ADG were collected on 1/17/2025. Complete data, along with ADG for the total test will be available on our website WEBOAngus.com and also available on sale day.

**ANGUSMEDIA** EPDs contained in the hard copy of this sale book were current as of print date. Digital versions of this sale book can be viewed online at [www.angus.org](http://www.angus.org) and will have EPDs updated every Friday with the exception of EPD references in footnotes and photos. Any PDF downloads from the website will contain EPDs current as of the date downloaded. References: American Angus Association®, AHIR®, AngusLink™, CAB®, Pathfinder®.

• We really liked Resilient females - did not like their dispositions. Feed efficient, super udders and really good feet. Craftsman is who we chose to use moving forward with the Resilient cattle. Better dispositions, still great feet and udders, highly maternal and in our view a female maker. Top 30% WW & YW; Good Carcass, Top 15% Marb & Top 30% REA; Top 1% \$M, Top 10% \$W, Top 15% \$G & Top 10% \$C. He covers lots of bases for our program.

• I love this bull! Packed with performance, a long, deep, thick, expressive bull, that has structural integrity and is free moving. If you get this much performance it usually comes with some BW, nothing excessive but some. Top 30% WW and Top 25% YW, great feet and docility; they are young but great females. Makes me happy at Top 30% \$Maternal and just right Milk at +21. He checks every box, Top 35% \$W; Top 20% \$G; Top 3% \$F; Top 5% \$B; Top 4% \$C. Graduate of Midland, ADG 4.30 #, 1 # of gain to 4.64 # of feed, big Ribeye bull with 16.8 REA @ Yearling.

• He's a country boy - bought him because of the cow family and his PAP EPD, -2.55. Top 15% for CED, +12; Top 10% BW, -1.2; his young cows have nice perfect udders. Absolutely excellent feet, another big reason he's in the bull pasture. If your country is harsh, look at the Bank Notes. They'll take rugged hard country.

• A super nice Re-Ride bull we bought at Vermilion Ranch, MT. Calving Ease with a +7 CED. Keeps performance in Top 25% for both WW and YW. Top 25% Docility, +22. \$ Value Indexes, he is Top 30% \$M and Top 25% for \$W. The best thing about Re-Ride is his Countdown dam. Countdowns in our herd are efficient and just keep bringing in good calves.

• Purchased from Lyle Bowman, his sire Bank Note is a big ol' pile of muscle, excellent footed, country covering herd bull. Good PAP EPD; Top 4% CED & Top 5% BW; Negative BW, do whatever check'em twice a day.

### FREQUENTLY ASKED QUESTIONS

What are the benefits of selecting for low residual feed intake (RFI) animals\*:

- Reduction of overall feed intake by up to 12% while maintaining the same level of production
- Reduction in the maintenance requirements of the herd by 9-10%
- Improvements in the feed conversion rates of calves of from 9-15%
- Reduction of manure NPK production by 17% and greenhouse gas emissions such as methane, by 30%

What does this mean for a cow herd?

By selecting for RFI, or introducing several low RFI bulls into your herd, feed-related savings will continue to increase. Several years of genetic selection will improve the baseline feed efficiency of the ranch and savings will continue to transfer to the cow herd as replacement heifers are retained.

What is Residual Feed Intake (RFI)?

Residual feed intake (RFI) is a measure of feed efficiency that is calculated as the difference between an animal's actual feed intake and its expected feed intake. RFI is independent of body weight and size. Differences in the trait cannot be detected by physically looking at an animal, it requires accurate and simultaneous measurement of an animal's feed intake and body weight. Animals with low RFI values are more efficient than those with high RFI values.

What is the heritability of RFI?

RFI is a moderately heritable trait (26-58%), and when used as a selection tool, will result in progeny that consume less feed for the same level of production. RFI is independent of growth, body size and other performance traits, meaning that selection for animals with low RFI will lead to reduced feed intake and improved feed efficiency without compromising body size or growth.

Does selection for low RFI animals, that eat less, result in reduced performance and average daily gain (ADG)?

No, selection for RFI does not result in cattle with reduced performance and ADG. Efficient and inefficient cattle can have both high and low ADGs. To prevent a decline in performance, it is important to select for low RFI animals with sufficient ADG. GrowSafe does not recommend single trait selection.

How is RFI calculated?

RFI is calculated as the difference between an animal's actual feed intake and their expected feed intake. An animal's expected feed intake depends on its body size and growth rate. The calculation for expected feed intake is comprised of data from the entire contemporary group using the animals' dry matter intake, mid-test metabolic body weight and average daily gain data. The GrowSafe data analysts use the data captured automatically and continuously by the Feed Intake technology to determine each individual animal's actual feed intake, which is compared to their expected feed intake. Concurrently, the highly accurate partial body weights collected from the GrowSafe Beef® technology are used to determine each individual animal's average daily gain and body weight.

Example:

|          | Expected Intake | Actual Intake |
|----------|-----------------|---------------|
| Animal A | 8.5             | 10            |
| Animal B | 10              | 9.5           |

- Animal A:  $RFI = 10 - 8.5 = 1.5$
- Animal B:  $RFI = 9.5 - 10 = -0.5$

Animal B is more efficient because it has a lower RFI value and because it eats less than expected for its size and level of production.

\$Value Indexes Weights & Ratios

Calving Ease Rating

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

### GROWTH

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

### MATERNAL

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Cow Energy Value (\$EN)**, expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

### CARCASS

The genetic evaluation produces a single set of EPDs for carcass weight, marbling score, Ribeye area and fat thickness. The units of measure are in carcass trait format and analyzed on an age-constant basis.

**Carcass Weight EPD (CW)**, expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling EPD (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Fat Thickness EPD (Fat)**, expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

### \$VALUE INDEXES

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

**Maternal Weaned Calf Value (\$M)**, expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

**Weaned Calf Value (\$W)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

**Feedlot Value (\$F)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires.

**Grid Value (\$G)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

**Beef Value (\$B)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

**Combined Value (\$C)**, expressed in dollars per head, is an index which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid. EPDs directly influencing a combined index are: CED, CEM, WW, YW, Milk, HP, DOC, MW, Angle, Claw, DMI, Marb, CW, RE and Fat.

### CALVING EASE RATING

- 4 Bulls should work on all heifers
- 3 Bulls should work on most heifers and smaller younger cows (Really thin or extra small or really fine boned heifers excluded)
- 2 Bulls should work on most young cows unless they are thin or extra small framed
- 1 Bulls are for mature cows only

• Another good old Upward 12-yr-old cow & drought bred back AI. I have truly loved Upward cows; nobody was a beauty queen, but they sure have lasted, great feet and bone, and they never needed toes trimmed. He'll cover lots of cows, and you'll like what his calves weigh.

• Sired by 035. He was a go getter birth to weaning - 3.45 # WDA birth to wean. Range ready and built to cover some country. I do want to bring up in my opinion this bull, his dam and sire have lived here with not a single problem for PAP, his EPD is higher than we like. He's been right here and has done fine his whole life. Consider for terminal cross bull. Will have PAP test score sale day.
