AT THE RANCH // WIBAUX, MT

Selling 154 Simmental, SimAngus & Angus Bulls

Welcome to our 49th Annual Bull Sale!

As I sit down to welcome you to our 49th Annual Bull Sale, I am very appreciative of all our acquaintances and valued customers and friends that we have made through this great adventure. Approaching the 1/2 century mark, is both exciting and exhausting. I just can't express the amount of gratitude and respect that we have for our customers, friendships, neighbors, and family members that help and support us throughout the years. Developing a breeding program and producing a production sale does not come without a great deal of planning. So first and foremost, thank you one and all.

As for the cattle industry we all have to feel very fortunate of how the future looks. Our responsibility of feeding the world is not an easy task. You, our fellow ranchers, are the behind the scene folks, that do the lion's share of producing that enjoyable eating experience that many take for granted. On those cold stormy nights calving cows in a blizzard or dealing with a hot dry drought, when the scoring sun delivers very little relief to a set of thirsty cows, with dry ponds and low water supplies, along with scarce grass supplies, makes raising cattle difficult. You may not even be noticed or appreciated for your efforts, even though life on the ranch is not always a bed of roses. We all have to admit, it is a way of life very few of us would want to give up. Having the opportunity to raise our family in an environment that instills great work ethics around a clean environment that provides our children with a wealth of knowledge and memories that way too many children will never experience.

We are about to embark on a new chapter of opportunity that will take a lot of hard work and dedication by our leadership. They have a huge task ahead of them to level out a playing field that will make all facets of life more livable. As for you our fellow Ranchers and Farmers, all signs point toward some very good years ahead. We can all improve our ability to be more profitable and comfortable in this great industry.

There is no greater opportunity to be more progressive and profitable in the cattle business than now. Although it will take work and planning with today's opportunity to utilize top genetics from operations that include all the tools that are available, both genetics and science based. It has and always will be our commitment to provide you the rancher with top genetics that will be loaded with the right blend of cow producing ability to be profitable on your ranch. These cattle will be packed with efficient cow making maternal genetics that will withstand harsh environments, stay easy fleshing and passes the right eye appeal, performance, and carcass merit to increase value. Their calves should demand top prices and produce the extra pounds to bring an extra \$200-300 per head. Cross breeding is that free lunch that will produce extra value.

We want to invite you to be a part of our valued customers that not only use our genetics, but have become some of our best friends. On February 5th, we will offer the opportunity to enhance your genetic lineup with profitability. We want to thank you our valued customers, all you past supporters, and invite new customers to enjoy good cattle, good fellowship, and valuable genetics that will take us into the next decade loaded with OPPORTUNITY.

Sincerely,

Bill & Darlene

*John, Alicia, Charlotte, Maggie, Harrison & Gabe

RANCH LOCATION

The sale will be held at the ranch located south of Wibaux, Montana.

Go 4 1/2 miles south of the Wibaux County Fair Grounds on Highway #7, then turn left on Black Diamond Road (east) go 1 1/2 miles, then turn right (south) on Custer Trail Road, go 2 3/4 miles, sale location is on the left hand side of the road.

From Beach, North Dakota, take Exit One, turn left, go past both Truck Stops, approximately 1 mile to the first stop sign (please note the 4 way stop), turn right at 4 way stop, go 7 miles west, then turn left on Custer Trail Road and go 2 3/4 miles, sale location is on the left hand side of the road.

From Baker, Montana, take Highway #7 north, approximately 35 miles, turn right on Red Top Road at mile marker 71, where you'll see the large black bull ranch sign, go 1 1/2 miles east (Custer Trail), turn left, go 1 1/4 miles, sale location is on the right hand side of the road.

CATTLE VIEWING

We welcome your visit anytime that you are in the area. Please call before you come, so that we are here to show you around.

ANNOUNCEMENTS

Announcements made sale day and from the auction block during the sale take precedence over printed material associated with this sale. Anyone attending this sale attends at their own risk. Begger's Diamond V Ranch or any of the sale force will not be responsible for any personal injury or loss while attending this sale.

SALE ORDER

Bulls will sell in catalog order, selling Angus bulls last.

TERMS AND CONDITIONS

As recommended by the American Angus and American Simmental Associations. Cattle will only be released from the sale after they have been settled for. In no instance, will any cattle be allowed to be loaded for shipping without full settlement, unless prior arrangements have been arranged. Simmental EPDs listed in the catalog were populated on December 31, 2024. The Angus bulls have EPDs shown from the American Simmental Association. Please note that EPDs may change from time sale catalog is printed, until registration papers are transferred.

FEEDING ARRANGEMENTS AND DELIVERY

We will offer free keep of your bull until the first of April. At that time we will semen test and give your bulls a breeding exam and deliver them free of charge up to 500 miles. The bulls will be delivered to your ranch or in some cases when there are multiple owners of cattle on the truck and there is a need to unload and sort cattle, we may ask that you meet us at a central location that is convenient to both parties. For cattle selling over 500 miles away, we may have to hire a trucking firm to help with delivery, if so, we will guarantee delivery cost not to exceed \$300 per bull. In most cases, we will deliver them ourselves, but occasionally we will put the bull on a commercial truck that is reputable and conscientious. For purchases of cattle a long distance away, we ask that you be flexible on delivery dates in case we have the opportunity to send your bull your direction earlier than April 1st. When purchasing a bull from Begger's Diamond V Ranch, we take responsibility in delivering a healthy, breeding bull. We will take responsibility of injury or death loss while the bull is on our ranch. Responsibility of your bull purchase begins when he reaches your ranch or delivery point. We guarantee buyer satisfaction. If you have any problems with your bulls ability to breed and settle cows, let us know so we can make it right.

BREEDING SEASON GUARANTEE

All bulls selling will pass a complete breeding soundness exam before delivery on or about April 1st. All bulls are guaranteed for fertility and genetic soundness for the first breeding season. If a bull is proven to be a non-breeder for fertility or a genetically caused soundness condition, we will replace the bull with a satisfactory replacement, issue credit of the purchase price to be used in future sales, or refund the purchase price. This guarantee does not cover broken legs, infectious disease, miss-management, neglect or frozen scrotal or foot rot. We will stand by any breeding tool injury. This guarantee does not cover death loss. When a bull is warranted, we will deduct a \$2,000 salvage value. The reason behind this is, this makes the owner of the bull to take care of the animal before his salvage value gets worse. The balance will be refunded or credit will be given on a fair replacement. Money warranted must be used on only 1 bull, if the replacement bull brings more than the warranted balance, buyer must pay the balance at settlement. If the replacement bull brings less, then the warranted balance there will be no refund or credit on the balance. Before a bull is sold, you must claim the warranty, a vet analyses or picture should accompany a claim. Most of all, give us a call as soon as a problem is discovered, so we can make things right. All warranty claims must be reported to us by November 1st of that year.

HEALTH AND VACCINATIONS

The Bulls were vaccinated at branding with Pyramid 4, with Presponse and Vision 7 with Somnus, Enforce 3 Nazelgen, Bovi-Shield Gold and again at weaning, they were poured with Ivermectin on September 3 and again in December.

SIGHT UNSEEN PURCHASES

We guarantee all sight unseen purchases. Call ahead and we will go over the bulls and try and match you up with a bull that meets your needs. You can leave a bid with us or any Sales Rep, or by phone, whichever is convenient for you. We know our cattle and strongly recommend that you call and visit with us on all sight unseen purchases.

ONLINE BIDDING **DVAuction**

Our sale will be broadcast over the Internet on DVAuction. If you cannot attend the sale in person we have set up this method so you can view the sale and make a purchase. Make sure you pre-register with DVAuctions before sale day. We likewise will offer phone service sale day for those who prefer making their purchase that way.

WHAT CAN YOU EXPECT FROM BEGGER'S DIAMOND V RANCH GENETICS

Our goal is to offer the best when it comes to total profitability. When we select our genetics, we consider all the avenues in the beef business. First of all we look at what will keep you the cow-calf man profitable. Things such as calving ease, fleshing ability, udder quality, disposition, and phenotype, along with mature cow size, and their ability to raise a calf that is worth more at sale time, and is efficient. Producing cattle that the feeders and packers desire. How do we select our genetics? We use EPDs, dollar based Indexes such as API and TI, DNA and genomic testing, and eye appeal, along with the ability for an animal to be productive, wean a satisfactory calf, breed back on time, and have the ability to use the feed source that our environment provides. We try to run our cows in the same way that most commercial outfits run their cattle and the cows are still in excellent condition. We believe that the API is a valuable tool to consider, but feel that it is simply a guideline, and like all EPDs and dollar indexes, should be used as a way to split the difference

between a choice of 2 animals that appear to be alike. It is just one equation that needs to be considered along with an animal's performance, eye appeal, and ability to survive in its environment. When you purchase your seedstock, take the time to look at your suppliers' cow herd, what do they look like, are they functional, what is their udder quality like, what is their frame size, and do they calve easy, stay in shape, and do they produce a high percentage of their body wt. We consider it all and believe we offer a good solution and end point.

Come take a look, we will have the majority of our cows available to observe, so you can see for yourself what you can expect your cowherd to look like if you use Begger's Diamond V Ranch genetics.

Every bull in the sale has been DNA tested and parent verified to ensure accuracy and improve predictability.

FALL SIMMENTAL BULLS

THE FALL BULLS

This set of bulls were born and developed on the range, everyone born unassisted. They were raised on mother's milk, and what they ate alongside their dams when we began feeding them in November, NO CREEP! We weaned them in late March and fed them a TMR mix of hay, silage, and some corn to develop them along until the last week of May. They were summered on grass and free choice mineral until October, at that time we brought them in to develop them for the sale. These bulls are the ones that survived our strict guidelines, we were hard on them for structure, disposition, and performance. If they had a hiccup we steered them. Rest assured these bulls were never pushed hard, so they are athletic and ready for their new job. They should not melt much. Most people tell us they stay together very well. They are the cream of the crop, no excuses, only the best are offered to you, our valued customers.

This is quite a bull and he should probably be staying right here. I don't know how you can make one any thicker or put together any better. You must admire this guy for his overall balance and substance. Any way you look at him, he shines physically, with performance, and on paper. He has the goods! A real herd bull.

This bull is another absolute chunk of a bull. He mirrors the Lot 1 bull very much. He is not overly tall, but clean in his makeup, as deep and wide as you can make one. If you like moderate framed cattle that are strong topped, clean fronted, and easy keeping this is a bull you will want to own. This is the first set of these Value sons, and they show as much promise as any sire group at the ranch.

This Eagle son is put together well and out of a two year old heifer and a darn good one at that. He is long, wide bodied, and very easy on the eyes. He weaned at a big 793 pounds and did it with no creep in a fall and winter setting. He has the potential to sire the best both maternally or terminally. The stage is set, all he needs is a pasture full of cows.

It has been fun to observe this set of fall bulls, they have so much to offer. This bull is a tank, deep, soggy, and wide bodied. This SimAngus bull has the looks, the balance, and the performance to sire sale topping calves. They say if they weigh more, they pay more and that fits this bull. No, he is not a big horse of a bull but he has balance and style in a nice moderate package.

A big strong Nightcap son out of a heavy milking dam. This one is all bull, big and rugged, and full of muscle and volume. 185L has a big sweeping rib cage and is going to sire power. He will work like a dream on a set of Angus or baldy cows. This is a true herd bull that will sire cattle the industry demands. A bull that will sire the gas and efficiency that feedlots love. His dam is a no miss cow and always brings in one of the best at weaning.

Another bull that closely resembles lots one and two. Very thick, moderate framed and full of the genetics that will sire efficiency. His dam is moderate framed female with big capacity and has a perfect udder. Keep the heifers and reap the rewards of fertile, good uddered, and gentle cattle that can survive in tough conditions. The feeder cattle he will sire should be powerful. Note, he is hetero black so he does carry a red gene.

Sometimes, I feel like I am describing the same bull repeatedly. Again, the bulls in this first pen mirror each other. He is very moderate, thick, and well put together. This is one of many good Align sons we will drive through the sale, and everyone is very useful and powerful. The dam of this bull is moderate, thick, deep, and wide. She is very easy fleshing and always stays in shape, and you cannot put a better udder under a cow. I will emphasize the maternal value this bull brings to the table.

A very long, clean made bull that is a 1/4 Sim and 3/4 Angus. He is very attractive in his makeup, and his dam is a big, high volume cow that is heavy milking. This bull is sired by one of Bob Miske's good Angus herd sires. We neighbor pastures and did find his bull in with our cows. When we blood typed for parentage, he did not type to our bull. So good notes tell us he is out of a Miske Angus herd sire. He is a real eye catcher, you will like him!

RETAINED SEMEN INTEREST IN BULLS

Every bull sells in his entirety. We do retain the right to collect 200 units of semen, at our expense and your convenience, for in herd use only. If an AI stud purchases the bull we do reserve the right to buy semen at cost, as if we were a share holder, but will not receive any revenue. In most cases very few bulls will ever be collected. If you have questions on our retained semen interest please ask.

I like this bull, very quiet disposition and is nicely put together. Out of Jailbreak, a bull we AI'd our heifers to. This one is a good one, easy on the eye and smooth in his design. His dam is one stout girl, easy fleshing and packs that easy doing quality. Use this bull on a set of cows you want to protect at calving, don't worry, he will sire them right and loaded with performance.

We are leading off this second pen of fall bulls with one that could have very easily lead off the whole sale. A big time performance bull with all the goods. He will be a nickel taller and may add a touch more frame than the bulls before him, but he has the right kind of balance to go along with it. You are going to notice quite a few of these Nightcaps and boy are they the right kind.

You have to like this big guy! A Rarity son out of a real nice two year old Topshelf daughter. This combination brings out excellent performance from two of our very top cow families. Expect feeder calves that grow and have the style to catch your buyer's attention. The heifer calves will have excellent udder quality as well.

This bull will work well on a set of British based cows to add some excellent performance and length of body. A purebred bull that will sire extra pay weight and power in his calves. He is heterozygous black, so he does carry the red gene.

I like this bull, he takes after his dam, long, strong, and powerful. This bull will add a little extra dimension to a set of calves. They will be a bit bigger framed and have some extra punch at weaning as well as in the feedlot.

This is a very well put together bull, he is very clean in his design and should put some extra class in his calves. His two year old dam is a big volumed and an easy on the eye kind of cow. This bull is 1/4 Simmental and 3/4 Angus. He did not blood type to our herd bull and is out of a Miske Angus herd sire that we found in with the cows. Not a bad bull at all. He might be a real ticket for the cowman who wants a lower percentage Simmental bull.

A young Heyday son out of a very consistent Angus cow. If you like power and performance then take a strong look here. He is one of the youngest fall bulls but stands up very well in this strong set. Heyday needs no introduction after last year's sale, where they all sold well above the sale average throughout the day. The D606 cow has led off the fall division before, so take note of this bull, a young one but very good.

This is a very well put together son of Align and out of a very good producing cow. He should sire longevity and fleshing ability. His twelve year old dam has never disappointed us. She always stayed in condition, always got pregnant, and always brought in a useful calf. This bull will be her last. His individual performance is a little lower, and I feel it is because of his dam's age. She always brought in one of the best, and with Align backing him up, expect the best.

You can count on Begger's Diamond
 V Ranch genetics to maximize the
 trait that counts the most "PROFIT."

This is a virgin two year old that was not raised on our ranch. He was purchased from Sys Simmentals when I thought I was going to need a bull for a customer. We were out of bulls but I told him I could help him find a bull. I acquired this bull and it turned out we did not need him, so here he is. A darn good, well put together bull. He is thick, thick, thick, and very gentle. We will back him just as if he was bred and raised here. He is not a cull in any way. Here is an opportunity to own a two year old virgin bull. He wintered with the herd bulls, so he is in his everyday clothes.

This is a thick, big bodied bull that has what it takes to make the next generation very good. Out of a two year old Topshelf daughter that goes back to one of our favorite thick, moderate framed cows. Sired by Varsity, this bull has the calving ease backed by a cow family that has done no wrong.

This is one of the youngest of the fall born bull being born in late November. This bull just about qualifies to be run with the spring calves. His dam is a big, stout, full bodied Angus cow that has a very nice disposition and is very easy keeping. She has a real neat, well put together udder. Being out of Align should really make this bull a valuable breeding piece. He should sire nice, good doing feeder cattle and his daughters should make nice cows.

This is a well put together Value son out of a Vermillion cow. This bull should sire very nice feeder cattle that have excellent carcass values being both his marbling and ribeye EPD's are strong. His dam was hurt so this did affect his weaning performance, along with a very cold January and February last winter. Don't let that fool you. He has the genetics to be a top producer and a cow making machine.

This bull was born a twin. We raised him on a bottle for about a month and then put him on a cow that never really took him, therefore he had to work to survive. Don't be fooled with Heyday and the G11 cow backing him. There is power in the blood here. You will not find a more gentle or easy to be around bull in the whole sale. That says a lot because there are no bad ones in the sale. This guy may be the sleeper of the day.

This bull was born a twin and is nicely put together. A bull that will project calving ease. Born light at birth and raised on his dam, here is a bull that could be used on these cows that need a little protection at calving. He will sire good, moderate sized calves.

SPRING SIMMENTAL BULLS

THE SPRING BULLS

These bulls were raised on mother's milk and grass. They were preconditioned in late August and the 205 weights were taken they then they stayed on the cow until October 7th. They were then weaned and brought home to be developed for the sale. When you look at the ADG remember that there is a 6 week period when they were on the cow. Many operations wean calves and start their ADG after the calves have balled off. We develop these bulls to be sound and athletic. We know we could make them gain more or be fatter or heavier but that is not in the best interest of the bull. We are not trying to win an ADG contest. We have a zero tolerance for bad dispositions so you can be assured each and every bull has been through a one on one experience at least 4 times. Bad acting bulls will never be sold as breeding bulls and they have been castrated and their life will end as fat cattle in a packing plant. Any cow or bull that is nervous or sires nervous cattle also leave our program. We do not care how good they look or how nice their calves are. We simply went to a no excuse program that has zero tolerance for bad disposition.

A nice way to start off a powerful set of spring borns. This son of Heyday earned the lead off position by being the top weaning bull calf this fall with an adjusted weight of 822 pounds to a ratio of 122. If you like cattle that are long sided with a touch of frame then this bull is a great candidate. He is the kind that will sire calves that weigh heavy and pay big. His dam is a herd favorite that is big volumed and has a super udder. She is the kind many would flush. This bull is very gentle and easy to get along with.

Just a tank of a bull, we are on the fence of adding this bull to our own herd bull line up. He is an absolute stud, big volumed, deep sided, and very complete. If you demand easy fleshing cattle that smash the scale down on sale day, this bull needs your attention. In today's world of chasing carcass, you won't come across this kind very often, yet this bull does possess excellent carcass merit as well along with top performance and excellent maternal traits. His dam is a power cow with a top notch udder.

A real breeding piece. He is out of a real gentle, well put together dam with a cow family that consistently brings in a top calf to the weaning pen, you will enjoy excellent cow power that has the ability to produce pounds and pay weight. The earning potential this bull brings to the table is top tier. Udder quality at its finest along with docility and excellent eye appeal and performance. How can you go wrong.

IT MAY BE COSTING YOU MORE THAN YOU REALIZE.

So many times I see sale ads that state over 80% of their bulls will work on heifers. Most cowherds consist of 80% mature cows and 20% heifers and first calvers. Do you really want a 65-75 lbs calf out of your mature cows? (It may be costing you more than you realize). Lighter birth weight highly correlates with lighter replacement heifers with a smaller pelvis thus creating more calving difficulties along with weaning weights that result in less money in the bank.

Here is another Ego son that came to the weaning pen weighing over 750 lbs. He will sire a little more frame and length. His dam is consistently good, always bringing in a top performing calf. He should really work on these smaller type cows that need a little more power. No matter how you use him, he should add pay weight and value.

TESTICLE MEASUREMENTS

The scrotal circumference of each bull was tape-measured on December 28, 2023. The scrotal measurements were adjusted to yearling, and sometimes will vary one way or another as actual yearlings. We guarantee our bulls 100% for fertility, unless damage is induced at your ranch, and then it's out of our control.

Recommendations for Scrotal Circumference:

Months of Age	12-14	15-20	21-30	30 +	
Scrotal cm	35	37	39	49	Excellent
	30-35	31-37	32-39	33-40	Good
	30	31	32	33	Poor

Smooth, smooth, smooth, is how I describe this one, so classy, and easy on the eye to raise cattle with a great look, along with their ability to perform. If you like cattle that are clean in their makeup, this bull is one to check out. I appreciate his young dam for her ability to raise cattle with a great look along with their ability to perform. If you like them clean made, long, and stylish, you should like this guy, he is very docile to boot. Note, this bull is heterozygous black, so he carries a red gene.

A Rarity son out of a real nice sensible sized cow with a perfect udder and great personality. If you enjoy cattle that look good perform well and make cattle that excel in harsh environment, this bull maybe the ticket. We certainly appreciate his cow line and feel he will sire daughters that will be the keeping kind, excellent disposition here.

I like this Tesla son and truly feel his dam is one of our elite cows. I would take a whole herd of her kind, excellent uddered, easy fleshing, big ribbed, and very docile, and she knows how to raise a top calf. The blend of G25 and Tesla looks to be a solid mating. He is excellent disposition and looks to be a top herdsire.

If we ever had a cow that consistently out produced herself the D39 cow would be at the top of the list. NO DOUBT, this cow is as efficient as any cow that ever ate grass on the Diamond V, always brings in a top calf no matter the mating. If moderate sized cows with elite calf raising abilities are your goal, you need to take a look here. If this bull sire's daughters like his dam, his value is limitless. One word described D39 EFFICIENT. All BS aside, this cow will go down as one of our best, great udder, and superb disposition to boot.

I don't know if you can make them any deeper or thicker. This bull is very easy fleshing moderate in his frame, and certainly packs a punch. He is out of our Scale Crusher son, and a real tidy moderate framed dam with an outstanding udder. Expect the best with this bull, he will sire them moderate, easy keeping, and loaded with efficiency. He is the kind that the cowman that likes, moderate, mature size, and the easy doing cattle look for. The udder quality will be exceptional in his daughters, absolutely elite in his design, you will not find many like him.

A real nice package here. A Value son that will certainly sire value. His dam was our choice out of the Vermillion Ranch 7 year old cow dispersion a few years ago. There is power in this bull, both in performance and maternal. This guy is very easy to like, he is loaded with eye catching style, along with top performance. The best part maybe his genetic potential to sire great daughters. He is the Diamond V kind, buy with confidence. He has got a very mellow disposition.

Looking to add some sensible sized cow making genes with superb udders here you go. The Hercules daughters have udder quality like no other, then add Southern Charm, you know you won't go wrong. But that's not all, you will have cattle that work on the range, feedlot, and rail, yes you can have it all. Here is a well-designed bull with a perfect disposition.

This bull is so well put together, long, strong topped, deep sided, and big butted. He is going to sire cattle with a lot of good in them. They will be easy fleshing, moderate framed, and will pack a punch weigh up day, his daughters will be the best. Very quiet and easy to be around. Not extreme in size but very complete. I would take a pasture full of his kind.

This Value son has the right makeup, easy keeping, deep sided, and designed to weather mother nature's wrath. The Value bull is very easy fleshing and is siring that trait in his calves. His Angus dam is a moderate sized cow that is very efficient. Her cow family is one of our favorites, and they have excellent udders under them.

A younger bull is the sale, but takes a back seat to very few. Here is a great example of the increased value you got by using Simmental on Angus cows. This bull has that quality that every outfit should strive to obtain. So smooth, clean made, and loaded with performance and eye appeal. His young Angus dam has a great udder and is productive. Mated to Align brought out the best of both Angus and Simmental breeds. Try to own an Align son, I feel he has as much to offer as about any bull in the breed. They are docile, excellent performers and very eye appealing.

What a thick bugger here! These Scale Crushers are for real. They absolutely are some of the thickest, deep sided, cattle in the Angus breed. Mate him to good Simmental genetics and the power comes out every time. This bull will sire moderate, thick, deep sided, cattle that look good. Better than that, they have what it takes to survive tough environments. No doubt the females will be the best.

A good performing Ego son like all the Ego's he has some body to him. We raised Ego and sold him to the Mavencamp ranch. Today we are proud of where he is, but wish he was still here. This bull is a very nice Ego son.

This bull could be the sleeper of the sale. A twin brother sells as the lead off yearling purebred on the sale as Lot 45. He is a very similar in his build. He was raised on a foster dam. Maybe didn't wean quite as heavy, but I feel he might be every bit as good. If you are looking for a purebred that offers excellent EPD valves and a pedigree to match don't overlook him, he could be the hidden gem. I would not be afraid to use this bull in our own program. Very nice disposition here.

A cool cat here. I admire this bull, he is long, strong topped, very clean and well balanced. The Rainfall cattle are so good. They calve easy and grow very well. The best part might be the excellent daughters. This bull is quiet and easy to be around. Might be the one for you, if you keep your cattle up tight, and have the family around all the time.

Out of a great 2-year-old dam and Clicker, these Clickers are about all out of 2-year-old heifers and are very nice. I believe he is one of the elite calving ease heifer bulls. Most calving ease bulls will never sire calves that perform this well. His 2-year-old dam is out of a power cow family. Here is the one to advance calving ease with top performance females. You should keep in mind nice disposition comes with the package.

An Align out of a very well-bred 3-year-old Pay Weight daughter, that is backed by one of our favorite Angus cow families. There is a lot of promise in this bull. He is the result of blending the best in both the Simmental and Angus breed. No matter how you breed this bull, expect eye appeal and performance. His daughters should be the keeping kind and his feeder cattle should be the eye-catching sale topping kind. These Align cattle are easy on the eye and easy to be around. He is very nice easy going bull.

A nice purebred Tesla Son. It looks like the Tesla's as a sire group were some of the top weaning weight calves, both years we used him expect calves that are born to excel in the pasture, feedlot and hang a useful heavy high yielding carcass. The cow family behind him are moderate and easy fleshing with very nice udders. So, I feel this bull should sire valuable replacements as well the Tesla's are very gentle as well.

This Valve son is a real balanced bull. His 10-year-old dam was one of our top picks as a heifer calf. She has not disappointed us. She raises a solid calf every year bred back and has stood the test of time. I feel this bull will really work on a set of British bred cows to make an excellent set of Sim-Angus replacements that are moderate framed, deep sided, easy fleshing, calf raising machines. The udder quality should be excellent and they will be easy to be around and easy on the eye.

The Jailbreaks are moderate framed easy fleshing, calving ease cattle, with very nice carcass values. This is the 3rd year we have used him on our own heifers with excellent results. They are born easy and make nice first calf heifer calves. This bull's 2-year-old dam is out of a very nice uddered high performance cow line. Want to make good replacements, this bull will help you get there. He will sire them moderate, efficient, and good.

SUGGESTED GUIDELINES FOR USING YEARLING BULLS

We are firm believers in the use of yearling bulls and feel it is one of the best years of their lives. It is a time when they are easy to manage and their only concern is breeding cows. We have found that yearling bulls that are managed carefully during the second year of their lives, not only do well, but they will perform better, over time. Below are some suggested guidelines for the care of yearling bulls.

Upon delivery to your ranch, keep yearling bulls separate from older bulls and feed them a maintenance ration of 5-8 pounds per head of grain and free choice hay. Reduce the amount of grain fed gradually, so that bulls are on straight hay or grass 2-4 weeks prior to the breeding season.

Where possible, try to limit the bulls to 45-60 days of pasture service the first year. At this time or as soon as possible, remove the bulls and put them in separate pastures with plenty of good quality grass.

It is best to feed yearling bulls separate from older bulls until after their second breeding season. This allows them to achieve the growth and strength to compete with older bulls for feed and space.

You will see the benefit of a little added cost and care of feeding a yearling bull by probably two or three more years of service from a well managed and healthy bull.

SPRING SIMMENTAL BULLS

BALANCED TRAIT APPROACH

It is our belief when breeding cattle the "BALANCED TRAIT APPROACH" is the right one! We want as much performance as we can get while maintaining that "Critical Balance" of calving ease, cowherd and feedlot efficiency and proven carcass value. All the while, never forgetting the unmeasured traits of structural soundness, udder quality, and attachment, mothering ability, vigor at birth, disposition, fertility, and longevity.

Isn't it neat how cow families breed so much alike. This bull's dam is a maternal sister to the 134M bull that is Lotted right before this bull. This Pounder son is out of a real well designed 2-year-old heifer that should go on to be a top producer. No doubt, out of a top cow family and layered with excellent longevity.

This purebred Epic son is out of a very nice 2-year-old HeyDay daughter. Blending calving ease and the smoothness of Epic with the powerful HeyDay brings out some real qualities from both Sires. You will enjoy a great set of easy going calves and a set of replacement heifers that will be the envy of your neighbors.

A young Align son that offers as much power and potential in the sale. Both his sire and Dam are true testaments to our program, both offer the best in performance, fleshing ease and maternal. You just can't go wrong with this bull, a little later in the sale, but you will want to add him to your bull battery.

This is a bigger framed rugged power bull. He will sire cattle that grow. His dam is a bigger framed cow with a lot of gas. He will add some punch to his calves. We went to a zero tolerance on disposition in our herd and have removed all the unruly cattle. We stand behind them all but this bull is not crazy at all but is still a little more alert than the rest, so just take note. We think he is fine, but maybe better suited in a larger environment.

From day one this stout son of a Value, strutted around and told us he is a bull. Today he still has the look of a top herd sire prospect. Moderate in size, very stout in his body type, and eye catching as can be. This bull should add fleshing ability, and a lot of rib shape, his lineage runs deep with big stout bold ribbed cattle. The udder quality will be the best.

A bull out of one of our finest. His dam Z26 is a proven producer we raised. The Lot 1 bull in the past and consistently brings in a top indexing calf. Her kind is what I value as the best. At 12 years of age, she still weaned a 104 weaning Index and bred back to do it again. The Nightcap bull was the \$27,000 high seller in Doug Bichler's sale so the sire likewise has great potential. Udder quality is the best. Don't overlook him, he is a little younger but the genes are in his blood.

I like this option, a Kansas out of the Banjo bull going back to D21. There is excellent maternal's here and that is where a successful program begins. But more than that there is so much fleshing ability and volume that comes from the D21 line. Likewise, disposition comes with that package. The Kansas bull is new to us, it looks like he will sire a fancy stylish look and bring in good udders and carcass values. Kansas's dam is by the \$350,000 Cowboy Up from the Hinman Angus Program.

Their 205 weight maybe a little behind, but do not let that scare you, these bulls are top notch. If you need a pair buy them both, they won't disappoint. Thick, deep and wide bodied, very gentle and the right kinds. They are sired by the great Step Up Angus bull from Select Sires.

WE STILL DO IT FOR YOU

Many breeding programs have moved to video sales, and like the idea that it takes less help and you don't have to upset or hassle the bulls. We feel that by bringing them in helps you validate your choice, watch their disposition, and also helps the rancher that didn't get his first choice to select another bull without having to move and go outside while the sale is going on. We also believe some videos don't necessarily offer quite as much true image as the actual animal presents. Yes, it takes more work and effort but you're our valued customers are worth it.

We have been using PayDirt for several years now, as ABS states Pay Weight's best son. We like the look, the perfect udders, and quiet nature he brings to the table. The D147 cow is gorgeous, very deep wide, long bodied and fancy great disposition, and perfect udder. Here is a bull that offers the best.

This is a true heifer bull, yep, another Clicker out of a 2 year old Eagle daughter. This bull is quite a calf, only 75 lbs. at birth, coming up with a big 205 wt of just short of 700 lbs. The udder quality should be exceptional on his daughters. Here is a big spread bull with some punch, super disposition here.

COAT, COLOR, AND POLLED GENETICS IN THE BULLS

These bulls were bred for generations to all homozygous black and polled genetics. As you can see everyone is either tested or genetically proven to be homo black. The ones identified as homo polled are genetically proven. Every single one of the bulls are several generations homo polled and all are smooth polled. The ones that just say polled are not tested but we firmly believe that they likewise are homo polled. As for the black factor you will find a few hetero black red carriers in the sale, as they have carried that gene on

recessively, they may throw a red calf if their dams are red or hetero black. The majority of the time they will sire black calves on black cows. All the bulls except the hetero black bulls will sire black calves, never a red one. The red carriers will be identified as heterozygous black and in the footnotes they will be identified as red carriers. There are a few bulls listed as Black, we will try to have color results back by sale time, likely most will be Homo Black.

A great way to end this Simmental part of this great set of bulls. Sired by Bed Rock, and out of a big bodied Range Boss daughter, and back to the B90 cow that most years puts a bull in the front of the sale. I truly feel this bull is a genetic blend that offers the best. If you like them moderate and soggy, here is one to own.

QUICK GUIDE TO ASA EPDS AND \$ INDEXES

Expected Progeny Differences (EPDs): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org.

Listed below are the units ASA EPDs are expressed in:

All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario. (See below for more details.)

Back Fat (BF): Inches of backfat.

Birth Weight (BW): Pounds of birth weight.

Calving Ease (CE): Percent of unassisted births when used on heifers.

Carcass Weight (CW): Pounds of carcass weight.

Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.

Milk (MLK): Pounds of weaning weight due to milk.

Marbling (MRB): Marbling score.

Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.

Ribeye Area (REA): Square inches of ribeye.

Warner-Bratzler Shear Force (WBSF): Pounds of force required to shear a steak.

Stayability (STAY): Percent of daughters remaining in the cowherd at 6 years of age.

Terminal Index (TI): Dollars per cow exposed under a terminal-sire scenario. (See below for more details.)

Weaning Weight (WW): Pounds of weaning weight.

Yearling Weight (YW): Pounds of yearling weight.

Yield Grade (YG): Yield grade score.

\$ Indexes: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

All-Purpose Index (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Terminal Index (TI): Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years (\$50 diff. x 30 hd. x 4 yr. = \$6,000). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes.

ANGUS BULLS

THE ANGUS BULLS

We are offering a small group of Angus bulls this year. Most are heifer safe and all are moderate, thick and the easy doing kind. They will sire excellent daughters.

Begger's Diamond V Ranch offering the genetics that provide the world with a consistently tender, flavorful, and enjoyable eating experience.

Here is a big rugged Scale Crusher son. We truly feel these Scale Crushers are absolute pound makers in a thicker deeper wide butted build than most Angus Cattle. This one is out of a hard working Vermillion cow.

We have maxed out what mother nature will allow us in weaning weights in these drier, short grass environments, without heavy supplementation, still maintaining the ability to produce cows that stay, and steers that weigh and pay.

A well put together Scale Crusher going back to the Peterson Southern Charm, and back to a very deep Capitalist cow. There is a lot of fleshing ability and keep ability in this guy. If you like them moderate and good, here is one to take home. This cow line is loaded up with good calving ease. I feel you could use him on bigger type heifers.

WE TRULY ENJOY PRODUCING BLACK SIMMENTALS

We truly enjoy producing Black Simmental, Sim-Angus, and Angus cattle that work for operations in all segments of the livestock industry. Since 1974 it has been our passion to raise high quality Black Simmental cattle that can grow, produce, and thrive in any condition. This year's offering is no exception. We are confident that only the top performance bulls will be offered in this sale. They are ready to go to work in any environment. We continue to use proven sires that produce the results we demand, along with a select set of exciting new sires that offer new genetics to the industry, and our valued customers.

We are driven to produce Simmental genetics that are structurally correct and highly reliable that yield offspring that are vigorous at birth, efficient in converting grass, into excellent weaning weights, all the while exhibiting a phenotype that you'll be proud

to have in your pastures. Our cattle undergo constant evaluation for efficiency, sound feet and legs, and udders that require no assistance or maintenance.

In our opinion these bulls are as good as we have ever offered. The bulls have been developed slowly to ensure soundness that should be long lasting. The fall bulls were summered on grass with only free choice mineral ensuring longevity. Regular culling occurs multiple times throughout the development process for structure, disposition, performance, and phenotype. Whether you choose genetics from the front of the sale or the last one to enter the ring, be assured they will provide benefits to any commercial cow/calf operation and many are of seedstock quality. If possible, stop by before the sale, we would love the opportunity to show you the cowherd, and how we run them in Eastern Montana.

REFERENCE SIRES

SIMMENTAL SIRES

WR2C VALUE J105

This bull was our choice out of the Elliot Sale. He is a stud, very deep, and big volumed. He comes from a very top cow family in that herd. He had a 191 Ratio for marbling, that is about unheard of, but 91% better than average. This bull is the real deal, he works on Purebred Simmental or Angus cows with excellent results.

BDV ALIGN 76J

Absolutely as good as any bull in the herd bull battery. Align is a home raised Favor son out of the powerful C26 cow. They just don't come much better, breed him Simmental, breed him Angus, don't matter, excellent results either way. He sires clean made easy fleshing calves that are the right kind, his sons are headliners.

BDV EGO 78J

A home raised ½ blood Sim-Angus bull, his sons are headliners in the sale. They are very deep and thick. We absolutely love his calves and for the right reasons. He offers more fleshing ability than any Sim-Angus bull we have ever used. Moderate, high performing cattle is what you get here.

BCLR NIGHTCAP J6041

The \$27,500 acquisition out of Doug Bichler's sale. Nightcap sires them thick and fleshy. He is out of one of Doug's top donor cows, and he is her natural calf.

RFS HEYDAY H48

This bull needs no introduction, high selling Impact son out of the Rydeen Program. His sons are in demand everywhere they are offered, very thick, high performing cattle. He is a pound maker. He improves disposition as well.

GW JAILBREAK 555J

We have used Jailbreak for 3 years with very good results. As a heifer bull they come easy and develop into moderate good doing cattle. He sires excellent dispositions.

SAV SCALE CRUSHER 2543

This is quite an Angus bull, his full brother topped the Schaff sale in 2022 at \$275,000. We purchased Scale Crusher in 2023, he was again one of the top picks of 6 full brothers. In 2024, another full brother again topped that prestigious sale, we are fortunate to own one of these full brothers. This bull is a moderate thick deep sided bull. He sires fleshing ability and works very well on Simmental cows. If you like them moderate and thick, his sons are ones to own.

THSR CLICKER K222

Without a doubt one of the most elite Sim-Angus calving ease sires we have ever used, we are very fortunate to own this bull. Clicker is heifer safe and a very high octane herd sire. His calves are performers in every sense of the word. They wean heavy and look to have excellent body mass and structure, yet they will be moderate easy keeping cattle that will be very efficient in the pasture, in the feed yard, and on the rail. We can't wait to put his daughters in production. The neat part is these cattle have excellent eye appeal, they are very classy.

ELLINGSON GROWTH FUND K225

A real valuable outcross to our program. These cattle are easy fleshing and have the vigor to get up and grow. We purchased this bull because of his extreme body mass. He is a sire of excellent bull and heifer calves. If you like them stout and rugged, here you go.

ELLINGSON JACK POT K272

We purchased this bull alongside Growth Fund, 2 half-brothers. They sire more calving ease than we thought we would get, but the calves grow and are maturing into some very eye catching cattle. Jack Pot will add length and a neat clean profile.

CCR KANSAS 21K

This genius son was the talk of the Cow Camp Spring sale. An embryo transplant out of a very impressive Cowboy Up Angus mother. He is loaded with an EPD profile that take a back seat to no one. His calves are smooth, easy to look at cattle, that offer top performance, carcass and maternal values.

SPRING CREEK TESLA 6E

This is the second year we have used Tesla. These cattle are performance cattle, they flat out perform very heavy at weaning and onto yearling. These cattle are for the cowman that demands heavy calves on sale day. They will be heavy muscled and have a lot of eye appeal.

CCR BED ROCK 5171J

A Sim-Angus Patriarch son that took the Sim-Angus breed by storm. We find them to be calving ease cattle that have nice performance. His sons and daughters have a nice clean look, and his EPD profile is very impressive.

KBHR HONOR H060

Is a bull that demanded \$102,000 to own. We used this bull AI and are happy with the results. Honor is a calving ease bull that puts some thickness and style in his calves. He works well on bigger framed cows with power, his EPD profile is second to none. He has some very special sons in the offering.

LRS TOPSHELF 902F

This bull was the top selling bull out of the Lassle Program 7 years ago. We have used him on every type of cow we own. These cattle are all good cattle, they are vigorous when born and perform well.

LRS RANGE BOSS 901Z

An older bull that we use AI, and have for many years. This bull just works his calves, always demand buyer attention, and many are sale features. Some say he is old school or old genetics, we say he is proven and well excepted by good cattlemen.

BREEDING PHILOSOPHIES

We found these 3 breeding philosophies quite interesting and felt they were spot on to our own breeding principles. With permission of a 3 nationally known highly respected Angus breeders we thought they were worth sharing.

MATING FOR OPTIMAL OUTCOMES, NOT EXTREMES

By Ellingson Angus, Chad and Stetson Ellingson, St. Anthony, ND

Discovering the ideal percentile range for every trait we measure and understanding how those traits correlate with one another guides us to create the phenotypic makeup desired by our customers. We breed cattle toward 'the middle' for most all commercially relevant traits that's the best method to drive genetic progress on all traits. By continually breeding our cowherd to the middle, we feel our matings can be more about matching kind to kind and less about mating one extreme to the other, thus creating more consistency in the ascending generations.

THE ANGUS COW

By David Brown, Montana Angus

The Angus breed's position as the number one beef breed in the world was built on the back of the Angus cow. She was reliable, productive, predictable, and built for the environment she inhabited. That Angus cow was fertile, functional and possessed a maternal instinct and intelligence that bordered on mythical. In the hills of California, the northern plains of Montana and the Dakotas, the arid Southwest, the corn belt of the Midwest and the hot, humid Southeast, that Angus cow went about her business of keeping countless ranches in the black.

The Angus cow began to change with the consolidation of the packing industry and the growth of grid-based marketing taking place over the last twenty five years. During that time span, industry experts began proclaiming that we must add more marbling, more growth and basically more of everything. Genetic trend in the beef cattle business became driven by theory developed in the board rooms of packing houses and in the class rooms of universities. Breeding programs began taking their cues from sale reports, semen companies and marketers intent on creating constant churn.

At first the changes were subtle. Today, it's painfully obvious that the pursuit of more carcass merit and growth came at the expense of the attributes that made the Angus cow the most efficient factory in the business. Ultimately, those paying the steepest price for this conversation are the ranchers whose livelihoods depend solely on efficiently raising cattle in our nation's harshest environments. These ranchers have seen their margins lessen and inputs increase with every calf crop. That Angus cow which was their most valuable asset twenty five years ago has become one of their costliest liabilities today. That Angus cow has gotten too big for her environment, failing to breed on time; her calf has more genetic potential for weaning growth that can be realized in most real world ranch environments. That Angus cow is often poor footed, poor uddered and requires supervision at calving time. The maternal instinct and intelligence which was a trademark of that Angus cow has been replaced by an instinct to run for the feed truck when the going gets tough.

THE COST OF LIGHT WEIGHT CALVES AT BIRTH

I saw this article in Sydenstricker's catalog, and thought this article was quite interesting, and spot on to what we observe. Breed Associations still believe a lighter calf at birth is better and calculate that in their EPD's, and dollar Indexes. We feel many of the real small have problems in the cold and at times with their lungs, and definitely they show up small at weaning time. No,

we don't like the huge born either, but on cows there is more rewards than losses with 90-95 lb calves.

Many of us have a predisposed notion that we want calving ease/low BW herd sires. But, in the Angus breed, do we really have that much problem with big calves? It seems like most of the problems at birth are more linked to abnormal presentations than actual calves that are too big for the cow or even heifer. And, it seemed like maybe those smaller calves just were not as thrifty. We decided to see if we could dig into the data, and see what survivability to weaning really looked like. After all, a small calf at birth doesn't really help the bottom line if he dies prior to weaning anyway!

We divided up four years of spring calf crops into three groups: (light) 69 lbs. or less; (medium) 70-89 lbs.; and (heavy) 90 lbs. and up. We edited out any abortions and all twins. In a nutshell, the death loss at birth through weaning was twice as high on the light calves as it was on the medium calves. The death loss on the heavy calves was the least of the three groups, and it was the least in every one of the four years. We did not differentiate according to cause of death, or whether it was right at birth or later on pre-weaning.

We've all heard someone say the growth rate of a dead calf is distressingly poor, and took that to mean we needed lighter calves at birth so we would get more of them born alive. Every operation is different, but it certainly appears to us that bigger calves at birth are more likely to still be around at weaning. We would never advocate breeding heifers to anything but a true heifer bull, but our cowherds might be much better served by sires that give their calves more of a head start.

A study by the University of Illinois on Sim-Angus cattle reported the same conclusions.

PARTING THOUGHTS

From Bill Begger, Begger's Diamond V Ranch

When I read David's article it struck a strong note with me the past couple decades, the technical world took over the cattle breeding business. Just like David says AI studs universities, and packing houses started dictating how to breed cattle. I believe using EPDs and all data sources when breeding cattle, but it does concern me when all emphasis is put on extreme EPD's and numbers with little or no consideration given to physical and mental traits. Many of Americas' cattlemen have lost a lot of ground by doing so. Like David states, bad feet, poor cow efficiency, lack of fertility, and fleshing ability, cows that can't have a 90 lb calf, mostly due to too much EPD hype and not enough experienced eye. Folks we find it is a true give and take the best way to create uniformity, balance and cattle that work in the real world is from experience day to day observance and blending the best of both worlds. Like Chad and Stetson Ellingsons' little article states, it is breeding towards the average and understanding that matching kind and not shooting for extremes every time makes for more consistency and will contribute more uniformity and consistency creating less cowherd fall out. The three articles were written by some of the Nation's well respected Angus breeders. They see the writing on the wall as many astute cattlemen do. We believe our Simmental and Sim-Angus program will help propel your operation down the right road. They will compliment the Angus, Hereford, and baldy cattle very well. They will enhance fleshing ability, udder quality, and maternal traits. We run our cows rough and tough, we know how genetics work and we have the experience to know the difference. "Yes, we do have to eat them, but we also have to breed them and feed them." Our genetics are designed to put cow efficiency back in your herd, and they still work very well in the feedlots and packing house, qualifying for carcass premiums, and creating an enjoyable eating experience for the consumer.

**The decision you make today will influence the next 20 years.
Make it a good one. Use Begger's Diamond V Ranch seedstock.**

EPDS VS. ACTUAL DATA

There is a lot of hype out there about EPDs, genomic testing and carcass traits. We believe in the use of all of these genetic enhancement tools. We also know that you can ruin a good cowherd in a blink of an eye if you chase paper traits with no directive or focus put on the mother cow and what it takes to keep her in production with as few inputs as possible. There are breeding programs that only provide EPDs with no actual data. Be careful, at times these cattle might not offer a total package, the upkeep, loss of production, and lack of fertility may cost more than the rewards. Every breeder has the actual data, we believe that as a customer you deserve to access it, if it isn't there, ask for it. Any competent breeder

shouldn't be afraid to share it. Raw data such as actual birth weights, 205 wts., 365 wts. and performance data and indexes allow you to observe how an animal has performed within his contemporary group. It shows you his potential to sire calves that may increase or decrease certain traits. There are way too many cattle out there with excellent EPDs and dollar indexes that are not worthy of anything but a castrating knife. You can breed for all the highest EPDs and indexes in the world, but if you sacrifice cow efficiency, foot structure, fleshing ability, maternal and physical traits, such as udder quality, along with an animal's ability to produce pay weight, all you will gain is a cull cow with good EPDs.

OUR COW HERD

They are a useful easy fleshing bunch. They are as consistent in type and kind, as you will find. Just like the bulls we offer not much variance from top to bottom. Their consistency will rival any program. Our mission is to make our worst cow as good as our best. We don't have a favorite cow and we don't make excuses for any of them. If they fail to stay productive or get bred, they go to town and tour the inside of a packing plant. Udder quality, ease of handling, fertility, and the ability to stay easy fleshing without extra care or pampering is a must. Our cows must be able to withstand tough harsh weather conditions whether it is the extreme cold or heat. These cows have one mission and that is to bring a top quality calf to the weaning pen. We do not do any embryo transplant, but truly feel that our herd runs deep with donor quality females. One thing I have a problem with is when I hear, oh she was open, so we decided to flush her. I wonder why anyone would want to multiply poor fertility. Our

herd bull battery is rock solid. We are very aggressive when acquiring bull power. We seek top bulls from top cow families from top programs around the nation, but feel the need to buy genetics that come from operations with weather conditions similar to our environment. We run a very aggressive AI program, breeding over 450 females every year. We don't go crazy over the next hot bull and use a lot of proven genetics, but always sampling new breeding options that show promise. When we find a bull that works, you will find his service for several years. We feel strongly in using bulls that are proven and sire consistency. There are a lot of bull stores out there with a lot of different options. The folks behind every program are what makes the difference. We would like to believe we offer the best in genetic value and service. We are the outfit with a true genetic blend that will keep your cowherd profitable.

NO TIME TO LET UP

We hear so many say, it doesn't matter if our calves were light, they bring a lot of money per pound. As we begin to rebuild America's cow herd, ask yourself "IS IT MY COWS OR MY CALVES THAT PAY THE BILLS!" For the past 10 to 20 years, we have heard a lot of chatter about carcass traits. Many have put a very high emphasis on them. Yes, it is very important to produce cattle that are end product oriented. But overemphasis on terminal trait selections doesn't necessarily have the cow/calf man's best interest in mind. Carcass selection is necessary but remember it is a terminal trait. Most cow/calf men rarely capture the rewards. It is a well-known fact that terminal traits are antagonistic to maternal traits. Many have found out the hard way that their cow herds have become less efficient, productive, and profitable. Is a small premium today worth jeopardizing your cowherd. A good balance of all traits is the key. Don't sacrifice your own cowherd by over emphasizing any single trait. Just remember THERE IS NO GOOD OR BAD EPDS. They are designed to help you increase profitability by making it easier to increase or decrease and improve efficiency traits that need adjusted. Just remember extremes are not always desirable or profitable EPD's are no different. The highest or biggest number does not always offer the best efficiency or outcome. It takes more than a set of computer generated numbers to create a balanced program. First of all, choose genetics that complement your environment. Choose a program that

puts in the extra effort and is built by the owners and operators that calve the cows and do the day to day work. They are the ones that understand how to use a common sense approach. They understand how to blend the genetics to add value WHETHER THE HIDE IS ON OR OFF. First of all, the cowherd must be sustainable. It is important to understand that all cows are not created equally. There are vast differences in cowherd efficiencies, fertility, longevity, her fleshing ability, cow size, udder quality, calving ease, dispositions, foot quality, and a cow's ability to withstand extreme temperatures, both hot and cold. Some cows are better mothers and better calf raisers. The perfect cow must be efficient, sensible sized, easy fleshing, fertile, and problem free. She must be able to survive the tough times with as little extra imputes and labor as possible. She must be productive and produce the performance and pounds to pay the bills. Small calves bring a lot of money per pound, but always come up short compared to efficient heavy calves at sale time, at times over \$300 per head difference. Calves from efficient cows put more money in the bank, it is just that plain and simple. So ask yourself again, is it your cows or your calves that pay the bills. At Begger's Diamond V Ranch, we use a well-blended common sense approach that is profit driven to generate dollars and cents. So, the cow-calf man, the feeders, and the packers will all stay profitable and the consumer can enjoy the results. We invite you to come reap the rewards.

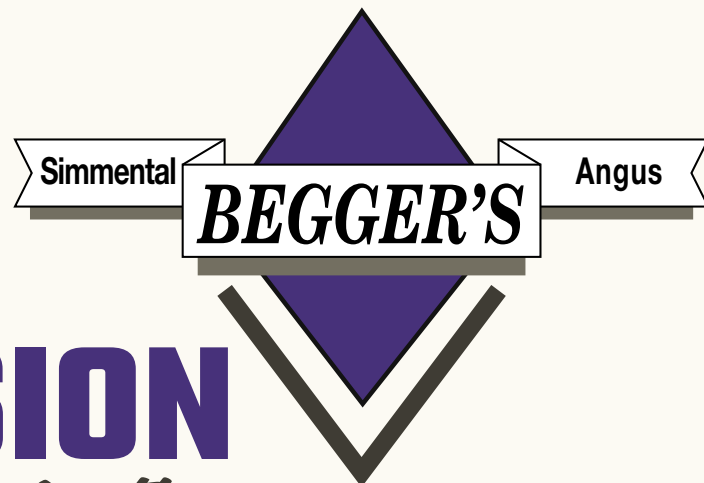

WE TRULY CHERISH AND APPRECIATE OUR CUSTOMERS. WE FEEL THAT WE OFFER SOME OF THE MOST VALUABLE GENETICS AVAILABLE. THEY ARE DESIGNED TO WITHSTAND MOTHER NATURE'S RATH, BUT JUST AS IMPORTANT, THEY OFFER VALUE TO EVERY SEGMENT OF THE INDUSTRY RIGHT UP TO THE BEST EATING EXPERIENCE MONEY CAN BUY. IF YOU HAVE ANY CONCERNS, PLEASE KNOW WE STAND BEHIND OUR CATTLE AND IF THERE IS A PROBLEM WE WILL FIX IT.
